Subject: Recommendations for Updating the Customer Database

Hi Kyle,

Here are my main recommendations:

Issue	Proposed fix
Some customer records are more than five years old.	Review old records and see if we should keep, update, or delete them.
The old database is not compatible with the new mailing software.	Create a new database in Access. Talk to IT first before we change anything.
The old and new systems cannot merge files easily.	Move to the new database step by step with help from IT.

I also have some questions:

- Do we want to improve the database, or start a campaign with old customers?
- How is this connected to our email database?
- There are many inconsistencies. Is this the correct database for this analysis?

I think we should share this with other teams before we do anything. This way we don't affect other work in the company.

Please let me know what you think.

Best regards,
